

PJ O'Rourke

TEE TECH PACK

Two styles. One drawn, one waiting. Every number came from a file or it says TBC.
Sizes are placeholders from Bella+Canvas until PJ's blank is confirmed.

IF IT SAYS TBC, ASK. DON'T GUESS.

THE RULES

Every value came from a file, or it says TBC. The art facts are read straight from PJ's Illustrator file. Everything else waits for the blank maker, the printer, or PJ.

Print from the vector. The pictures in this pack are for reference. Films come from the .ai.

His line stays his line. No cleanup, no redraws, no smoothing. The signature is his real signature file.

PJ signs every strike-off. Nothing runs without the three signatures on the last sheet of each style.

THE 2.0 VERSION

Same pack, in 3D. Spin the tee, switch Unisex / Women's and XS to 3XL, try the colourways, tap a number to jump to its spec line.

<https://feldtdesign-ship-it.github.io/pj-tee-tech-pack/>

The 3D tees are stand-ins sized to Bella+Canvas 3010 (unisex) and 6110 (women's), chest and length only, until PJ's blank is confirmed. This PDF is built from the same data and renders as the page.

OPEN DECISIONS

SETTLE BEFORE FILMS

WHITE FILLS

The drawing has white filled shapes inside it: the clouds, the suit, the bike. On a white or cream shirt they disappear, so it prints as one ink. On any other color they either print white (a second ink) or go open and take the shirt color. Pick one before separations.

HARD EDGE

The clouds and the road run off the artboard on all four sides. Printed as it is, the graphic reads as a hard 9 × 12 in rectangle. Keep the rectangle, or PJ closes the edges.

LINE ON DARK SHIRTS

Black line disappears on a black shirt. A dark colorway needs a light line color, or this style stays on light shirts.

SIGNATURE SIZE

The signature sits center back just below the collar. Its width and how far down it sits are open. The viewer lets you try both; the numbers stay TBC until PJ signs off.

RGB TO SPOT

The file is RGB. Separations should convert the black to a spot ink before films.
